

Changes to the HILDA data made between Release 12.0 (December 2013) and Release 13.0 (December 2014)

Changes to Wave 12 files

Cleaning

- Due to a change in fieldwork data delivery, back-coding of some multi-response questions did not occur correctly when the 'other' response was back-coded to a code numbered 1 through 9 (no longer supplied as '01' to '09'). Applied to the following variables:
 - D2 Job seeking activities, 57 'other' responses now coded to one of the activities.
 - D6 Reasons had trouble get job, 37 'other' responses now coded to one of the reasons.
 - D11 Reasons not looking for work, 74 'other' responses now coded to one of the reasons.
- HF structure date and household response status for a few households cleaned or recalculated during death matching (*_hhcomp_i*, *_hhcomp_f*, *_hhcomp_s*, *_hhresp_i*, *_hhresp_f*, *_hhresp_s*, *_hgri_*, *_hgrf_*, *_hgivw_*)
- Back-coding of "qualifications studying for/qualifications obtained" for an additional 88 Wave 12 continuing persons (because of a changed fieldwork variable name)
- Back-coding of other – specify for the Wave 12 CPQ question "CPQ:A20 Level of highest qualification obtained" (New question which should have been back-coded during ASCED coding)
- One Wave 12 lone-person household (i.e. one household and one interview) has been deleted as this person and household were found and classified as part of the continuing HILDA sample but they were not the HILDA sample member who was being traced.
- ASGC and other geography variables which were missing for one lone-person responding household [telephone interview, we knew they had moved but not where] have been added from the Wave 13 fieldwork as they had not moved at Wave 13.

Corrections in calculations

- After the additional back-coding of D2 Actively seeking work, two cases changed labour force status from Not in the Labour Force (Not in the labour force, marginally attached) to Unemployed (Unemployed, looking for PT work). [*lesbrd*, *lesdtl*]
- *lhura* DV: ABS unemployment rate in major statistical region corrected to 2012 parameters
