*HOURS: We are interested in the total number of hours spent by all children (of each age type) in each type of care. For example, if 2 school-aged children are cared for by a paid sitter for 5 hours each week, the recorded answer should be 10 (i.e. 2 x 5 hours).

*COSTS: If a school-aged child is in the same type of care as a pre-school-aged child, the total cost should be distributed between them. For example, if a respondent pays $40 to a sitter to mind a 3 y.o. and a 10 y.o. for 2 hours, the cost should be split among the children. That is, record $20 in column C and $20 in column F.

Household spending

R23 I now have some questions about household spending. How much does this household spend on all groceries in a normal week? LIST A on SHOWCARD R23 shows you the type of things to include. Your best guess will do.

R24 And of this amount, about how much of the weekly grocery bill goes on food and drink (but not alcohol)? LIST B on the showcard shows the type of things to include. Your best guess will do.

The gap between this and R23 should be mostly cleaning products and toiletries. If the gap is substantial, or the amounts are the same, probe to check accuracy.

R25  Approximately, how much would this household usually spend per week on meals outside the home; that is, restaurants, take-aways, bought lunches and snacks? Do not include anything spent on alcohol.

Where applicable prompt: Include your children’s expenditure (e.g. lunch money, etc.)

Record whole dollars $ 9999
